About Us

Believe in the Invisible (BITI) is a women-led non-profit redefining the disability narrative. Founded and driven by leaders with lived experience, we bridge the gap between societal perception and the reality of invisible disabilities. Through the power of storytelling, art and advocacy, we amplify the voices of millions whose challenges remain unseen but whose impact is undeniable.

Our Mission

We exist to dismantle the stigma surrounding non-visible impairments, including chronic illnesses and mental health conditions. By centering intersectionality, we advocate for systemic change across:

- Inclusive Employment: Sensitizing global workplaces to hidden needs.
- Policy Reform: Driving legislative recognition and reasonable accommodation.
- Social Equity: Highlighting how disability intersects with gender, education, and healthcare.

Our Journey: From a Spark to a Movement

What started as a digital heartbeat has evolved into a national catalyst for change.

- **2022 | The Catalyst:** Launched as a [one-week campaign](#), *Believe in the Invisible* invited the world to see the unseen. The overwhelming response proved that the community was ready to be heard.
- **2023 | The Expansion:** Our follow-up campaign, *Caring is Believing*, deepened the dialogue, fostering a global ecosystem of empathy and peer support.
- **Today | The Movement:** Impact transformed us. What began as a series of stories is now a registered non-profit and a powerhouse platform for advocacy, training, and systemic inclusion.

Our Team

1. Anjali Vyas; Co-Founder,

Advocacy and Sensitisation Lead

Anjali Vyas, a Chemical Engineer turned IELTS Trainer and a Disability Rights advocate, co-founded Believe in the Invisible to advocate for people with invisible disabilities. Diagnosed with MS in 2014, Anjali began advocating for affordable treatment and research with the MS Society of India. Her relentless efforts, including a petition led to a National MS Registry by ICMR in 2022. She presently also serves as the Honorary Joint Secretary of MS Society of India, Pune Chapter. As a disability research fellow at NCPEDP, her work focussed on employment for people with MS & blood disorders. She is also an alumnus of a leadership program of the U.S Department of State. was the Ambassador of Multiple Sclerosis at the Purple Fest in January 2023. Her goal is to build an inclusive society for people with disabilities while pursuing her passion for teaching.

2. Aarti Batra; Co-Founder, Research and Programming Lead

Aarti Batra is a young woman with an invisible disability, Thalassemia Major. She is currently enrolled in a PhD program at the University of Delhi, where she will be studying the memoirs of women with chronic illnesses and their potential contributions to the emerging discipline of bio-cultures. Aarti has a background in English Literature and is passionate about the feminist movement, human rights, accessibility, and impactful research. She has been working in the disability sector for the last two years through the Javed-Abidi Fellowship Program, where she assessed the accessibility and availability of public healthcare for people with disabilities in Gurgaon. She has been a Research consultant on various policy evaluations with clients like

The World Bank.

3. Shashank Pandey: Legal and Policy Advisor

Shashank, a former Research Fellow at Vidhi, specializes in legal and policy matters concerning climate and environment. Previously a LAMP Fellow, he drafted legislation on environment, disability, and technology for a Lok Sabha MP. As a Javed Abidi Fellow at NCPEDP, he focused on inclusivity and accessibility issues, particularly the political exclusion of disabled individuals. Shashank holds a BA LLB (IP hons) from Dr Ram Manohar Lohia National Law University, followed by an LLM. His policy-related articles are widely published.

Shashank Pandey
Legal and Policy Lead

Disability as a concept needs broadened understanding among people around us. We need to acknowledge that disability exists in diverse forms and every person with disability has a unique set of requirements. We need to build ecosystems that generate enough sensitivity among people to understand disability beyond visibility.

SHARE YOUR STORY !!

According to [Global Disability Inclusion, LLC](#), 75% of people with disabilities have an invisible or non-apparent disability. Undisclosed invisible disabilities remain hidden, fueling misconceptions and societal barriers.

Join us in raising awareness by sharing your experiences. Your voice can make a difference!

If you have a story to tell, share with us here - <https://forms.gle/LkVgyVU1EzofobnD7>

or scan the QR code attached below!

Our work :

- **Believe in the Invisible Campaign - 2022**

In 2022, “Believe in the Invisible” was a brief yet impactful one-week campaign designed to amplify the voices and experiences of people with invisible disabilities. By inviting personal stories, the campaign garnered a remarkable response, shedding light on the often-overlooked challenges faced by this community. The one week Campaign concluded with a panel discussion called ‘REDEFINING THE INVISIBLE’, which has eminent speakers from the disability sector.

The Campaign created a platform for individuals to share their journeys, struggles, and triumphs,

providing a deeper understanding of the invisible obstacles they navigate daily. This initiative not only raised awareness but also built a sense of solidarity and support among participants and the broader audience.

1. [Montage video](#) of the Campaign
2. [Stories of people with invisible disabilities](#)
3. [Video](#) Testimonials of persons with invisible disabilities

- **Caring is Believing Campaign – 2023 :**

Building on the momentum of the first Campaign, Believe in the Invisible, a subsequent campaign titled "Caring is Believing" was launched in 2023. This extended initiative continued to spotlight narratives from diverse communities affected by invisible disabilities, fostering empathy, understanding, and support. "Caring is Believing" featured a narratives and perspectives of the communities who too are affected with invisible disabilities. It encouraged allies and advocates to share their stories of support and care, highlighting the importance of a compassionate and inclusive society. "Caring is Believing" aimed to create lasting change, empowering individuals and communities to recognize, understand, and support those living with invisible disabilities.

DISABLED LOVE Series:

Pain Awareness Month

The 2016 Global Burden of Disease Study revealed that pain and conditions related to pain are the top

Dating and relationships are integral parts of the human experience, offering companionship, love, and support. However, for people with disabilities, navigating the dating world can present unique challenges and opportunities. Disabilities, whether visible or invisible, can impact how individuals interact with potential partners and how they perceive themselves in romantic contexts. A 2017 survey by Scope found that 85% of adults aged 18 to 34 with a disability felt lonely, and one in eight had less than 30 minutes of daily interaction with others. Despite these challenges, many people with disabilities form successful and fulfilling relationships through adaptability, understanding, and open communication.

[Love Stories](#)

PAIN AWARENESS MONTH

Chronic pain isn't just a feeling; it's a constant battle that affects countless lives which is often unseen and misunderstood due to its invisible nature. According to the 2016 Global Burden of Disease Study, Pain is one of the leading causes of disability worldwide, impacting millions of people in their daily lives.

Here's what Heather has to say about her multiple invisible disabilities :

1. Navigating Tech challenges with invisible disabilities:

https://drive.google.com/file/d/1DS2ylohESyrO2iW-8x__vAmxXxd38EWJ/view?usp=sharing

2. Challenges of living with Acute Macular Retinopathy & other invisible disabilities:

September is the IIH awareness month!

IIH which stands for Idiopathic Intracranial Hypertension is a neurological disorder which is characterized by increased pressure inside the skull for unknown reasons, symptoms mimicking presence of tumor, causing excruciating headaches,

"The combination of blindness with my rare chronic neurological condition, IIH, along with Osteoporosis, PCOS, and other comorbidities, makes managing my invisible and dynamic symptoms complex. My condition requires the use of a programmable ventriculoperitoneal (VP) shunt implant in my brain, which helps balance my symptoms but also necessitates frequent intervals of lying down to stabilize my brain pressure. The shunt is sensitive to magnetic fields, which can disrupt its settings and cause further imbalances, making it challenging to address my reasonable accommodation needs. This often impacts my overall productivity and efficiency, especially in environments where physical and digital inaccessibility creates additional obstacles.

nausea and vomiting, fatigue, pulsating sounds within the head, altered vision, sometimes permanent optic nerve damage and hence irreversible vision loss. Here's Kavya's story of living with IIH :

... Additionally, extreme weather and climatic conditions act as threat multipliers, taking a toll on my physical

"Travelling has always been overwhelming because the shunt is invisible just like the rare Chronic Neurological disorder (IIH) is"

A circular photograph of Kavya Poornima Balajepalli sitting in a wheelchair, holding a white cat. The background of the photo shows a building with large windows. The entire graphic is set against a yellow background with a blue footer bar.

DISABILITY PRIDE IN PROGRESS

In 2025, our social media awareness campaign, 'Disability Pride in Progress' evolved into a landmark movement, achieving resounding success as it tackled the complex, non-linear journey of pride. Recognizing that pride isn't always easy or immediate, we created a powerful sanctuary for voices that often go unheard, especially those navigating chronic conditions and invisible disabilities.

The campaign sparked a global dialogue, validating the "in-between" stages of self-acceptance and belonging. By reflecting on what had changed, what was still missing, and what pride looked like in the quiet moments of everyday life, we moved beyond traditional narratives to prove that simply being seen and believed is an act of revolution

Stories : Disability Pride in Progress

OUR EVENTS

International Purple Fest, Goa – 2024

In 2024, Believe in the Invisible co-organised the National Conference on Invisible Disabilities at the International Purple Fest, Goa, which was the first conference on India on Invisible Disabilities. Our team; Anjali Vyas, Aarti Batra & Shashank Pandey moderated 4 of the most pertinent Panel discussions on Invisible disabilities :

1. Journey to Diagnosis & Treatment : [Click here to read more](#)
2. Certification & Health Insurance Crisis : [Click here to read more](#)
3. Climate Change, Disaster Management & Invisible Disability: [Click here to read more](#)
4. The unseen reality of Caregiving: [Click here to read more](#)

1. Link to the TOI article : [Making the Invisible, Visible](#)
2. [Pictures](#) from the Purple Fest 2024
3. [Stories](#) recieved during th Purple Fest

- **Experience zone on Invisible disabilities:**

1. International Purple Fest Goa- 2024

In an endeavour to build understanding on invisible disabilities, Believe in the Invisible also curated an Experience Zone at the International Purple Fest, Goa; called EXPERIENCE THE INVISIBLE that brought to light the hidden struggles of persons with invisible disabilities. Using everyday items, we successfully simulated the nuanced symptoms and challenges of invisible disabilities that often go unnoticed. Participants engaged in activities like balancing on a water bag, blindfolded walks, and buttoning up shirts with rubber gloves, shedding light on the invisible symptoms / challenges.

The Experience Zone garnered attention from various participants, including Rajesh Aggarwal, Secretary, Department of Empowerment of Persons with Disabilities.

The initiative resonated across diverse backgrounds, involving people with

disabilities, employers, and NGO representatives. Their insights, shared on the 'Wall of Thoughts,' enriched the event.

[Click here to know more](#)

2. Purple Jallosh, Pune -2025

Our Experience Zone on Invisible Disabilities once again saw incredible participation from people across diverse disabilities and backgrounds. Visitors took on challenges that replicated sensory, cognitive, and physical barriers that many navigate daily. From NGO representatives to top government officials, including the PCMC Commissioner, and Maharashtra State Commissioner, many engaged firsthand in our simulation activities, gaining a deeper understanding of invisible disabilities.

Purple Fest, Delhi – Feb 2024

Our work at the International Purple Fest Goa also got us an invitation to the Purple Fest – Delhi at the Rashtrapati Bhavan, where we presented our work yet again and received support from other disability organisations.

We were largely visited by students with disabilities and executives from the Department of Empowerment of Persons with Disabilities. Participation in Purple Fest Delhi significantly broadened our network and alliances.

Hushed Impressions : Art as Resistance

In May 2024,
we hosted

"Hushed Impressions" at Kunzum Bookstore, Delhi—a vibrant physical event celebrating the intersection of disability, gender, and identity. This inaugural gathering brought together over 80 attendees for a powerful meld of art exhibitions, open-mic storytelling, and musical performances.

The event featured:

- **Artist Showcase:** A platform for artists with visible and invisible disabilities to exhibit and sell their work.
- **Policy & Narrative:** A panel discussion on "*Disability Art and Storytelling as Bodies of Resistance*," exploring how creative expression drives advocacy.
- **Inclusive Dialogue:** A diverse panel—moderated by a leader with an invisible disability—that engaged the LGBTQ+ community and broader social movements.

"Hushed Impressions" proved that art is not just a medium for sensitization, but a vital tool for systemic change and collective healing.

Narratives from the event :

"Art has always been something that uplifts my mood. The whole process from ideation, execution till the final piece brings me immense joy. Painting helps me calm down and is always the best stress buster."

--Preshtha

"Art plays many roles in coping with my mental health. On one hand, I can say for sure that my mental health mostly inspires my art; on the other hand, art is also a companion. I feel emotions that I don't understand and try to create art to make sense of them. Additionally, I create art with the hope that someone out there will connect with it and feel that they are not alone."

--Manas Mahendra

Art Therapy Workshop

The virtual Art Therapy workshop emphasized on the communal aspect of art-making, encouraging people with disabilities (visible & invisible) to share their creations and experiences, thus fostering a sense of solidarity and mutual support. It provided a safe, supportive space for participants to explore and express their emotions and experience the therapeutic benefits of artistic expression, fostering personal growth and emotional well-being. The event included guided art activities & interactive sessions designed to inspire creativity and emotional expression. Through these activities, participants not only created art but also engaged in a process of self-discovery and emotional release.

ZINE WORKSHOPS

MS Society of India

On the occasion of World Multiple Sclerosis Day, BITI brought an [online zine-making workshop](#) to the MS community to celebrate the global MS movement navigating MS together, with the powerful theme: "My MS Diagnosis."

We folded paper, splashed colors, and stitched pieces of our journeys into handmade zines. It wasn't just art – it was a rebellion against invisibility. It was healing. It was freedom.

2. International Purple Fest, Goa – 2025

In collaboration with the Goa State Commission for Persons with Disabilities, we hosted a highly successful two-day Zine-Making Workshop at the International Purple Fest Goa- 2025.

Across six small-group batches, participants with disabilities, chronic illnesses, caregivers, allies, used the medium of zines- handmade, self-published booklets, to reclaim their narratives through collage, drawing, and writing. The workshop was a resounding success, creating a transformative space for reflection and connection, and proving that creative storytelling is a powerful tool for personal and collective advocacy.

3. Orchvate

Partnering with Orchvate, we delivered a virtual zine-making experience centered on neurodiversity and inclusive expression. This workshop empowered neurodivergent individuals to use visual storytelling as a tool for self-advocacy, helping them communicate their unique perspectives and strengths in a creative, low-pressure environment.

AWARENESS THROUGH COMIC STRIPS

Comic strips and visual representation play a pivotal role in advocacy and storytelling, particularly when it comes to raising awareness about invisible disabilities. These creative mediums can communicate complex emotions, experiences, and challenges in a way that is accessible and engaging to a broad audience. Unlike traditional text-based content, comic strips and visual art leverage imagery and succinct dialogue to convey powerful narratives that resonate deeply with viewers. Believe in the Invisible's innovative use of these mediums has significantly contributed to its mission of creating a more inclusive and understanding society.

Cushing's Syndrome Awareness Day

About

It is a disorder that

THE INVISIBLE WILD

High output can still hide burnout

Build environments that support, not expose

I am not clumsy, just misplaced. It depends where you place me.

Some days I leap. Some days I just float. Both are valid. My pace protects my power.

Energy isn't always visible..rest is part of the rhythm

Normalize talking about hard days too.

I smile, but that's not the whole story. Silence can be heavy too.

Beyond the Peel

Depression/Anxiety

Some of my hardest days leave no visible mark but they're there.

Post-Traumatic Stress Disorder

My defenses protect me, but they can also make me seem distant...

Neurodivergence

There's a lot going on inside, even if it's not easy to decode.

Autoimmune Disorders

We may look alike, but what we're dealing with isn't the same. Each one varies in nature.

Social Anxiety / Sensory disorders

I may seem fuzzy outside, but my surroundings affect me. Please be kind.

Disability Certification: What You Can't See Still Counts

The RPWD Act 2016 - The Act acknowledges a few invisible disabilities but recognition doesn't always lead to a certificate.

Mental Health Matters!

Note: These examples represent a subset of invisible conditions and are not exhaustive in nature.

World Brain Tumor Day

A brain tumor can lead to several invisible disabilities, such as cognitive impairments, memory problems, emotional and behavioral changes, chronic pain, fatigue, and sensory deficits. Although these conditions are not outwardly apparent, they profoundly affect an individual's quality of life.

Source: Brain Injury Association of America

Endometriosis Awareness Month

Shedding light on the unseen pain. It's time to learn about the realities of this invisible condition, which often gets undiagnosed, where tissue similar to the lining of the uterus grows outside the womb, causing pain and other potential challenges.

Disease

It is a specific medical condition with a known cause.

Disorder

Group of symptoms disrupting normal functions, often without clear cause.

NAVIGATING HEALTH STATES ON WORLD HEALTH DAY

Syndrome

Collection of symptoms aiding diagnosis.

Condition

Broad term covering various health states, including diseases and disorders, ranging from fleeting to long-term issues.

made at all. This gene change can either hinder clotting proteins from doing their job correctly or cause them to be absent altogether.

@BelieveInTheInvisible

Our Achievements

1. Accessible IELTS Training for Persons with Disabilities

BITI led a first-of-its-kind [national initiative](#) to make IELTS preparation accessible for Persons with Disabilities, with support from the Department of Empowerment of Persons with Disabilities, Ministry of Social Justice & Empowerment, Government of India. The project resulted in an accessible IELTS Training Handbook, capacity-building of trainers across National Institutes, and the creation of inclusive, disability-responsive pathways to global education and employment.

2. C4AC RE:ACT Lab Pilot Program

Believe in the Invisible was selected as one of three organizations in India for a prestigious 6-month pilot initiative funded by the Urgent Action Fund. This grant provided BITI with a dedicated micro-grant and expert accompaniment to fortify our narrative strategy, visual identity, and digital security infrastructure.

3. Awarded a Micro seed Grant by GNYPWD

Believe in the Invisible was a [recipient of the Micro-seed grant from the Global Network of Young Persons with Disabilities](#), a U.S.-based organization dedicated to empowering young people with disabilities. This grant supported the initiative's efforts to advocate for the rights of individuals with invisible disabilities and to foster leadership in creating a more inclusive world. The recognition and support from this esteemed organization further validated the movement's impact and its potential to drive meaningful change.

4. Featured at Kalaneri Art Gallery

Believe in the Invisible was prominently featured at the Rare Diseases Awareness Exhibition on March 3rd, 2024, at Jaipur's renowned [Kalaneri Art Gallery - India](#). This exhibition, led by Mr. Vikas Bhatia, aimed to illuminate the intricacies of rare diseases prevalent in the country, offering comprehensive insights into symptoms, genetic mutations and available support groups.

5. Featured by NGO Trinayani in their film on invisible disabilities

Believe in the Invisible was also featured by NGO Trinayani in their [Film on Invisible disabilities](#) during the International Purple Fest Goa 2024. The film included real-life stories from people with invisible disabilities, showcasing their experiences and challenges. Our

co-founders; Anjali Vyas & Aarti Batra were also the part of the video, sharing their personal journeys and further emphasizing on giving a voice to those with invisible disabilities

**GURUPRASAD
PAWASKAR**

**State Commissioner for Persons
with Disabilities, Goa**

"Having delved into disability matters, I understand the intricacies of invisible disabilities. These conditions, though impactful, aren't always evident to others. This lack of visibility often breeds frustration, isolation, and doubt. Hence, It's crucial to promote understanding and focusing on people's abilities and believing them. Through storytelling & raising right kind of awareness about invisible disabilities, we can create a world where every person with an Invisible disability is believed, feels empowered & belonged."

@believeintheinvisible

has lent her support, further emphasizing the initiative's importance on a national level. These endorsements from prominent figures in both governmental and legislative positions reinforce the relevance and effectiveness in raising awareness and advocating for the rights of people with invisible disabilities. Their backing not only enhances the movement's visibility but also validates its mission to create a more inclusive and understanding society.

Testimonials from the leaders

Further solidifying their credibility, "Believe in the Invisible" also garnered support from several notable figures. Among them are Mr. Praveen P. Ambashta, Deputy Chief Commissioner for PWD at the Chief Commissioner's office, Delhi and Mr. Guruprasad Pawaskar, the Disability Commissioner of Goa, whose endorsement highlights the campaign's significance and impact within the disability advocacy community. Additionally, Dr. T. Sumathy, a respected Member of Parliament,

PRAVEEN AMBASHTA

Deputy Chief Commissioner of PwD

“We all know that invisible disabilities exist. But, we are not sure how to recognise it. The worse is that guidelines for assessment of these disabilities are not adequate so the uncertainty pervades not only amongst the masses, but also amongst the medical fraternity. And probably, the worst part is that sometimes the families of the affected persons think that there is a virtue in the disability being invisible and so they guard this with zeal. These are just some of the challenges persons with invisible disabilities face. If the whole system is in denial then how would we mainstream, empower and use the tremendous talent that is there. I am not saying that nothing is being done or there is no discussion about this, but we need to substantially scale up our efforts in every area. Very happy to see @believeintheinvisible following up on the chatter.”

@believeintheinvisible

Dr. T. SUMATHY

Member of Parliament, Lok Sabha

Hello, everyone. I'm Dr T Sumathy (aka) Thamizhachi Thangapandian. Today I want to highlight a great initiative led by “Believe in the Invisible” Team to bring forth stories of people living with invisible disabilities. In our community, many face barriers because of their invisible disabilities. Invisible disabilities, also known as hidden & non-apparent disabilities, are those disabilities that are not visible or are hidden from the human eye. Invisible disability to referring symptoms such as debilitating pain, fatigue, dizziness, cognitive dysfunctions, brain injuries, learning differences and mental health disorders, as well as hearing and vision impairments. It's estimated that globally, 75% of the people with disabilities have an invisible or non-apparent disability. This social platform was started by Shashank and his team, which aims to foster a dialogue around invisible illness and disabilities through various advocacy measures. This is a significant step towards raising awareness and advocating for those with invisible disabilities. Let's work together to create a society that understands and supports persons with invisible disabilities.
